OPTIMIZING SPACE WITH COST EFFECTIVE, HIGH-DENSITY STORAGE

Interlake Mecalux' Drive-In/Drive-Thru Pallet Rack is a high density storage solution ideal for homogeneous, low-rotation products with a large number of pallets. It is perfect for stocking large quantities of relatively few product types. With a wide variety of heights and depths available to meet any storage requirement, Drive-In/Drive-Thru pallet rack can reduce overall square footage requirements by 35 percent or more compared to a standard Selective Rack configuration.

A Drive-In pallet rack system uses the same entry and exit point for each storage bay, providing last in, first out (LIFO) access. A Drive-Thru pallet rack system is loaded on one side and unloaded from the other for first in, first out flow (FIFO).

With roll-formed Drive-In/Drive-Thru racks, products are stored several pallets deep and the lift equipment enters the structure to store or retrieve items.

ADVANTAGES:

- ◆ LIFO/FIFO (last in, first out/first in, first out) configurations
- ◆ Reduces space, cuts cost, and holds more loads
- ◆ High volume, low SKU
- ◆ Eliminates the need for multiple aisles
- ◆ Provides control over entry and exit
- ◆ Designed specifically to suit your pallets and forklifts

Contact Conveyor Handling Company to help define your unique material handling requirements for Drive-In/Drive-Thru Pallet Rack.
