Clearing the Air

Envira-North Systems has recognized a worldwide need to reduce energy consumption by contributing to the effectiveness of heating, cooling and ventilation systems. Their products and systems enable your building to perform better; save on heating, cooling, mechanical operating costs and provide a healthier environment for the occupants of the structure.

Envira-North's energy efficient HVLS (High Volume Low Speed) ceiling fans utilize Altra-Air HVLS fan technology to create a non-disruptive breeze to provide a natural, evaporative cooling effect. These fans blanket a very large area, constantly moving air to create an expansive comfort zone.

Benefits of HVLS Fans Include:

- Quiet, efficient operation, no annoying high speed circulating or exhaust fans
- Virtually maintenance free (recommended inspection every 20,000 hours)
- Inexpensive to operate; approximately 6 cents per hour for one fan at 0.75 kW (1 HP)
- Provides a constant even temperature from floor to ceiling and wall to wall
- A comfortable workplace environment increases productivity and decreases absenteeism

For more information on Envira-North's HVLS fans, contact Alan Carey, Vice President of Sales, at 443-561-3023 or email info@conveyorhandling.com.
