LOADING UP

Meet the next generation of truck loading. Stewart Glapat's double boom extendible conveyor, the Load-X Adjustoveyor, is designed to load trailers with cartons that come from a sortation system, or a cross-dock situation for fast-moving merchandise. The intention is to provide an economical and durable solution to the shipping environment, allowing cantilevered technology to replace expandable, flexible conveyors and drive-out units which have traditionally been deployed due to the number of doors in a typical distribution center shipping operation.

The Load-X Adjustoveyor unit allows packages to maintain a consistent flow without the conveyor touching the floor of the truck. It features a lower working height than your standard triple-boom unit and comes equipped with photoeyes, provided on both sides of the first and foremost boom. Movement is not dependent on gravity and trucks can be loaded at any angle. These units are safer and more ergonomic for employees allowing them to work multiple doors, using the indexing feature. Used primarily for outbound applications, the Load-X Adjustoveyor is the ideal solution for truck loading directly after a sortation system.

For more information on Stewart Glapat's Load-X Adjustoveyor, contact Alan Carey, Vice President of Sales, at 443-561-3021 or email info@conveyorhandling.com.
