Dematic's MCS Narrow Belt Sorter, the latest addition to the family of sorters, provides perpendicular transfers in mid throughput applications. These multiple narrow belt configurations have pneumatic take-up and transportation drive via Van Der Graaf Drum Motor. The sorter is available in 2, 4, 6, or 10 carrier belt configurations. There are also two options that provide four belts justified to either the right hand side or left hand side of the sorter.

The MCS Narrow Belt Sorter is built on the standard MCS frame and utilizes common transfer assemblies, a drive frame assembly with motorized drive pulley, and end bed assemblies to complete the sorter. Special slider pans are used to support the narrow belts for the entire length of the sorter.

BENEFITS

- Uses same Nitta belt technology as our conveyors, allowing for a longer sorter with less drives and energy consumption
- Ability to divert at 30 or 90 degrees
- Sorter uses Ethernet I/P communication for ease of install & commissioning (controls-friendly)

For more information on the narrow belt sorter and how it can be applied to your material handling needs, contact Alan Carey, Vice President of Sales, at 443-561-3021 or email acarey@conveyorhandling.com.
