Stewart Glapat's newest product, the Man-On-Board Adjustoveyor, is a 4 boom fixed base traversing unit with an adjustable platform operated by push-button control. It lifts the operator to a comfortable working height in handling conveyable freight near the roof of the trailers. Cartons of all sizes, tires, sacks, and steel drums can be safely and efficiently loaded or unloaded from over-the-road vehicles.

Controlled by two hydraulic lift cylinders, the Adjustoveyor allows the operator to move across the trailer and elevate to provide improved ergonomics and productivity. An automatic leveling device maintains a level platform without operator intervention. A manual mode is also provided for leveling. Microprocessors, variable frequency drives, and Category 3 safety circuits are provided to fully integrate the control of the Man-On-Board Adjustoveyor.

For more information on the Man-On-Board Adjustoveyor, please contact Alan Carey at 443-561-3021 or email acarey@conveyorhandling.com.
