An Instant Pallet Flow on Wheels

Mallard Manufacturing Corporation's Extend-a-Rail is the latest addition to their engineered applications product line. Instant pallet flow on wheels – Extend-a-Rail is a mobile, expandable pallet flow lane that provides temporary pallet staging where and when it's needed. This unique new product answers the challenge for more efficient dock staging, assembly and wave picking applications.

Extend-a-Rail delivers measurable productivity improvements and labor savings by reducing travel time; from production line to storage area, dock to truck for order fulfillment, or truck to pallet for carton offloading and pallet building.

Rolling into place as a compact telescoped unit, Extend-a-Rail expands into a dense, push-assisted lane up to ten pallets deep. Once locked in place

and fully extended, pallets are loaded on one end and walked/pushed along the durable wheeled tracks to the opposite end for forklift extraction. After all pallets are removed, the lane folds back into place for storage or to be moved to the next activity area.

Extend-a-Rail Features:

- Retractable design offers a variety of lengths
- Flip-down handle makes it easy to move and fold for compact storage
- Feet lock in place to easily brace and stabilize the unit
- Light, yet rugged aluminum rails ensure easy transport
- Anti-backup devices can be used to prevent pallets from shifting

For more information on Mallard Manufacturing's Extend-a-Rail, contact Alan Carey, Vice President of Sales, at 443-561-3021 or email info@conveyorhandling.com.
